

# SLIMLINE VIDEO CAMERA

## Tool overview

This camera is designed to survey both narrow boreholes and those with a narrow access hole. This camera is ideally suited for in-situ rising main or pump inspections and fishing/recovery operations. The camera has a down hole facing, very wide angle lens, which allows a detailed overview of the borehole to be recorded.

Rising main join in 600mm plain steel lined borehole

Cascading water through perforations

3m diameter well

Unlined chalk bore-600mm

### Logging

#### conditions

2–9 m/min Free running or centralised

### Borehole

#### Conditions

Diameter 50 - 60mm Dry or clear water filled  
Unlined, plastic or steel lined

### Features and Benefits

- Survey recorded on USB and computer hard drive
- DVD available at end of survey for client to take away

## Specifications

Size	650 x 41mm
Weight	6.5kg
Max. Temperature	80°C
Max. pressure	60 Bar

### Why European Geophysical Services?

European Geophysical Services offers excellent and reliable field service coupled with many years of geophysical interpretation experience, efficient data processing and high-quality reporting. All our field operators are graduate geologists or geophysicists with data acquisition and interpretational experience able to give on site analysis and interpretations. For more information, please call 01939 210710. or email [office@europeangeophysical.com](mailto:office@europeangeophysical.com).
